

## Wilburn Motorsports Air Shifter Pressure Switch

### Installation:

Screw the WMS pressure switch into one of the 1/8npt ports in your air tank. You will need a toggle switch to complete the installation.

Run a switched 12volts to one side of the toggle. Connect the other side of the toggle to either wire on the pressure switch. The remaining pressure switch wire goes to the positive compressor wire. The remaining compressor wire goes to ground.

Once you turn your toggle switch on, the compressor switch will take over and operate the compressor as needed.
