

DOGWOOD RACING EZ DRAIN OIL PAN

- Place the pan under your bike where it will catch oil from your drain plug as well as your oil filter.
- Find the farthest your pan will sit from the edge of the lift then cut the 1" tubing just past the side of the lift. The tubing has a memory and will have a bend in it, lay the tubing so it is flat on the lift.
- Install the 90 degree fitting and the other half of the tubing.
- I like to use my empty 5 gallon fuel cans as the recycle can.
