

MPS Four Coil Tach Adapter Installation Instructions

The MPS Four Coil Tach Adapter was designed to combine the signal of each coil of an individual firing four cylinder engine. This allows the use of a standard Dyna Shift Minder System with no other modifications. Connect each green lead to the negative lead of each of the four coils. The recommended method is soldering, but you can use scotch lock splices also. If you already have a MPS Sport Bike Electronic Engine Kill you can tap into each of the four brown wires on the kill box harness. See Diagram below for connections. If you have any more questions we have a Frequently Asked Questions page at our web site as well as the telephone tech support. Thank you for your purchase of this MPS product. All products sold by MPS are for use at closed course competition events and not for use on public streets or highways.
