

MPS Lowering Strap Installation Instructions

Attach the strap to a brake caliper mounting bolt and drape it over the frame at the steering head. Attach the free end to the caliper mounting bolt on the other side. Pull the strap to the desired height and secure any excess strap material. Turn handlebars from lock to lock to reveal any buckle interference.

It basically works like a motorcycle tie down and has a release button. Press the button to put the bike back to the stock height when riding on the street. Check for any interference.

This strap is intended for off road closed course use only. It is not intended for use on public streets or highways.

If you have any more questions we have a Frequently Asked Questions page at our web site as well as the telephone tech support. Thank you for your purchase of this MPS product.

All products sold by MPS are for use at closed course competition events and not for use on public streets or highways.
