

Installation Instructions for the TT-13 Tiger Tail Fender Eliminator Plate

1. Remove Rear Seat/Hump and Grab Rail
2. Disconnect latch look cable from latch actuator
3. Remove Tail fiberglass assembly (be sure to unhook taillight wiring harness)
4. Disconnect and Remove Battery
5. Disconnect and remove ECU (and anything else you have hooked up on the tail section and stock black plastic fender)
6. Remove electrical harness from sub frame
7. Remove Rear Brake Reservoir (be careful not to drip any fluid onto anything...yuck!)
8. Remove the sub frame from the main frame
9. Remove stock plastic inner fender
10. Install TT-13 using the same mount holes as stock inner fender
11. Reinstall sub frame to main frame
12. If installing a new Gel Battery, see picture

Be careful if lowering a stock swingarm using 3rd adjustment hole. It gets real tight in there!
Install everything else left over.
Hint, double stick-um Velcro works great.

If you cut off your square license plate light from your tail light, the fender extends out further and you can remount your license plate bracket under the tail light for illumination.
Thank you for purchasing a Tiger Tail Fender Eliminator. Enjoy!
