MSD Smart Switch

Sanford, Florida, 005/11/2006 – Motorcycle Performance Specialties is excited to announce the immediate availability of the MSD Smart Switch. This is truly a Smart Switch! Not only can you choose between supplying ground or 12 volts to activate a circuit, but you can do it through the use of a long list of vehicles sensors! As long as the sensor is within 0-5 volts DC with a minimum signal difference of 0.5 volt, such as TPS, MAP, MAF, water temperature, oil pressure, boost pressure, etc...the Smart Switch can be used!

5350 McIntosh Point #132 – Sanford, Florida 32773

Innovative Racing Electronics

Activate a circuit by supplying a ground or a 12 volt source. The switch can be calibrated to 'learn' the sensor and it can be programmed to activate at a certain percentage of the sensor's signal range. Such as activating a nitrous solenoid when the TPS sensor reaches 95% or when the coolant temp sensor reaches a certain level to turn on an electric fan.

To assist in setting up the Smart Switch there are two LEDs to alert you when it is in calibration or operation mode. The MSD Smart Switches are in stock and available for immediate shipment.
