Installation Instructions for MPS Hayabusa Cylinder Head Kit

1) 1-0651-05 Kit include	2 8.		
a) 8 x 71-60-60771	KPM Valve Hayabusa Intake	e Triple Groove O S 34mm	
b) 8 x 71-60-60773	KPM Valve Hayabusa Exhau	ust Triple Groove O S 28.5mm	
c) 1 x 71-1300-S-50	KPM Valve Springs Hayabus	sa 65# (16 prs)	
d) 1 x 71-60-60761	KPM Retainers Titanium Hay	yabusa (16 pcs)	
e) 1 x 71-60-60807	KPM Keepers Triple Groove	Hayabusa (16 prs)	
f) 1 x 71-60-60805	KPM Lower Collars H T Steel I	, , ,	
,	S Hayabusa Valve Seal	(10 peo)	
3,			
Recommended Install	ed Height – Intake/Exhaust		
•	_	1.450"-1.460"	
,			
•	0.415" lift		
,		be necessary to use shortened valve gui	ides
rioto. I or eyeteme n	iai ingrior alan otook iik ik iilay o	70 mococcary to doc onertened varve gar	400
3) Notes:			
a) The difference bety	ween the installed height and the	ne coil bind height is considered "free-tra	vel"
i) The coil bind he	eight is determined by compress	sing the spring(s) with the retainer and	
basewasher in	place (a vice can be used for thi	is operation). Once springs are	
compressed, m	easure the distance between th	ne retainer and basewasher where the o	uter
spring contacts	them.		
b) Free-travel should	always be gross valve lift +0.06	60" for safe operation.	
c) Retainer – to – Sea	al / Guide clearance should also	b be gross valve lift +0.060+ for safe	
operation.		_	
d) Failure to check va	ilve train clearances can result i	in serious damage to an engine

TECH TIPS

Valve Train Terminology

- 1. Stem Protrusion is measured from the tip of the valve stem to the cylinder head. See Figure 1.
- Outer spring installed height is measured where the outer spring contacts the Retainer and Basewasher when assembled (See Figure 1).
- Inner spring installed height is measured where the inner spring contacts the Retainer and Basewasher when assembled (See Figure 1).
- 4. Retainer-to-Guide clearance is the distance between the Valve Guide (w/o the seal) and the bottom of the Retainer, with the Valve in the closed position (See Figure 1 and Notes 3 & 4).
- 5. Retainer-to-Seal clearance is the distance between the Valve Stem Seal and the bottom of the Retainer, with the Valve in the closed position (See Figure 1 and Notes 3 & 4).

Installed Height

1. In Figure 2 the installed height is measured from where the Outer Spring contacts the Retainer and the Basewasher. This measurement is taken when the Valve, Basewasher, Retainer, and Keepers are assembled in the cylinder head.

Coil Bind / Solid Height:

1. In Figure 3 the coil bind height is determined by compressing the Spring(s) with the Retainer and Basewasher in place (a vice can be used for this operation). Once springs are compressed, measure the distance between the retainer and basewasher where the Outer Spring contacts them.

Notes:

- 1. The difference between the installed height and the coil bind height is considered "Free-Travel"
- 2. Free-travel should always be gross valve lift +0.060" for safe operation.
- 3. Retainer-to-Seal / Guide clearance should also be gross valve lift +0.060" for safe operation.
- 4. Failure to check valve train clearances can result in serious damage to an engine.
