

MPS Dial In Board Installation Instructions

Find a good spot to mount your dial in boards. Using the Velcro provided, stick a couple strips to each side of the dial in boards. Stick the dial in boards to where you want them. Then you will need to drill a small hole in each side to zip tie them. This will provide a pivot so you can flip the dial in board up to change the digits and a secure means to hold them on if the Velcro loosens.
